Figure 1 | Schematic representation of the experimental design. The first part of the experiment consisted of a familiarization phase during which participants were exposed to the stimuli and practiced the task. This was followed by two blocks of trials, each containing 60 trials. In the first block, participants were asked to identify the color of the stimulus (red or green) and in the second block, they were asked to identify the shape of the stimulus (circle or square). The results of the two blocks were compared to determine if there was a difference in performance between the two conditions.
